Monte dos Reis : 37° 08' 47" N 07° 48' 28" W

ROAD Indication: Last digitalized point is at the Bowling :

37° 08' 34" N , 07° 48' 14" W

From the airport in Faro follow the signs to **A22** motorway direction **Espanha**. (Spain) On this A22 take exit No 15 (Olhao). On the exit-roundabout you take the third exit direction St.Catarina / S.Bras de Alportel. Follow direction St. Catarina for 4 km (straith on) until the signs indicating to the left ; Cerro de Leiria and BOWLING (orange sign). Go left and you have a lot of mailboxes on your left, also ours. Follow the road now for 600 m and the bowling place is on your left. Go 30 meters ahead and at the road-crossing turn right into the concreted road. After 400 m it goes down, on your left you see the old round well with the big wheel, now turn second road left (with the cobblestones), up an even smaller road , another 50m and there is Monte dos Reis (you can turn your car up there at the house!)

Monte dos Reis

We hope you have pleasant stay, but some things are important to know...

Home rules:

- Be careful around the house , no playing in the ruins !!
- No smoking in the house please.
- No BBQ on the terraces with tiles (oil stains) ,only on lower terrace with gravel.
- No bleach or kerosene etc. in the drain (bacteriological septic tank !)
 - If you go to the beach, please only take the dark coulered towels out of cabinet in the bathroom on the ground floor.

Water:

Water comes from own borehole (150 meters deep) equipped with a pump, next to the caravan. This water is very 'hard' so we have a de-calcifier in the basement with a 3000 litres storage tank and little pump.

Water for the garden (the hoses) is directly from the borehole. We have checked the water in a laboratory in Tavira, its Ok for consumption, see guest book.

You can also buy water in bottles from the supermarket.

Warm water

There are 3 boilers . Number 1 (50 liters) for first floor bathroom and utility room.
 Number 2 (50 liters, under the stairs) for ground floor bathroom.
 Number 3 (5 liter) under kitchen sink.

Each boiler has its own electric switch in the cabinet in the utility room, please turn boiler off when not needed. On each off the boilers itself there is a thermostat,do not put it too hot ! (burning risk).

Sewer system:

All drains go to the septic tank under the big cover on the lower terrace. The water overflow goes to a big hole with rocks, also under this terrace (pipe sticks out).

Garbage

Collect all garbage in plastic bags and deposit in the green containers you find at the roadside everywhere. You also can find separate containers for glass,paper etc.

Electricity

The electricity meter (from EDP) is behind the **left** white door in the wall outside, at the foot off the last concrete pole on the south side of the house. You could write down the amount of kWh when you arrive and when you leave. Behind the **right** white door is the meter from the production off the solar cells behind the ruin.

The real main switch (from EDP) is behind the little green doors at te other side off the above mentioned wall.

In the the utility room you find the main electric cabinet with all the switches for the house . There are 3 main groups (A,B and C), each with a differential switch.

The main (3-fase)electric cable goes from the utility room trough the basement (there is another electric cabinet) to one more electric cabinet in the little house next to the covered parking spot. In this cabinet there is also the control for the borehole pump .In there is also a timer, if pump runs more then 30 minutes, this switch will turn pump off (this is to avoid pump running dry). If this happens (green light is permanently on) the hand switch must be operated off-on to reset timer and so start pump again.
